

Content Compare Hot Folder

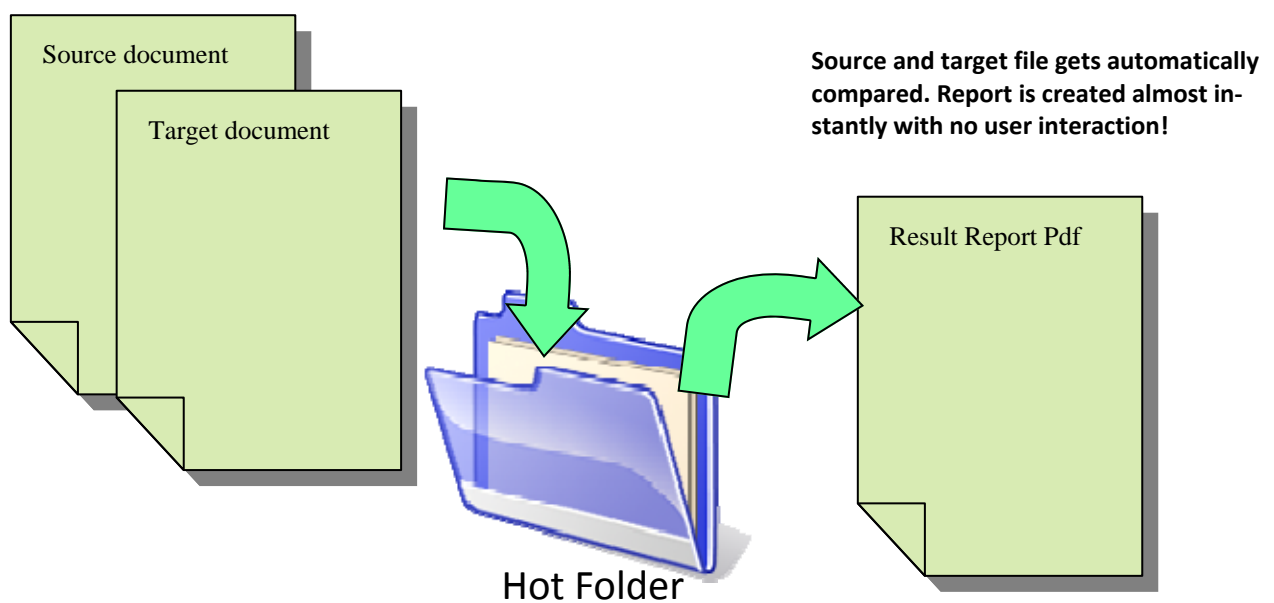

Advanced Electronic Proof-Reading and
Quality Control of Artwork Files without need
for user interaction

Content Compare Hot Folder

The Content Compare application developed by InformaIT is a an automated proofreading tool for professional electronic comparison of artwork files.

From version 3.0 there is also a possibility to run Content Compare using a hot folder that create a result report without need for user interaction.

As the interface requires no programming you can easily integrate this in your current manual or automated workflow.
