Advanced Electronic Proof-Reading and  
Quality Control of Artwork Files integrated to  
your existing artwork workflow system

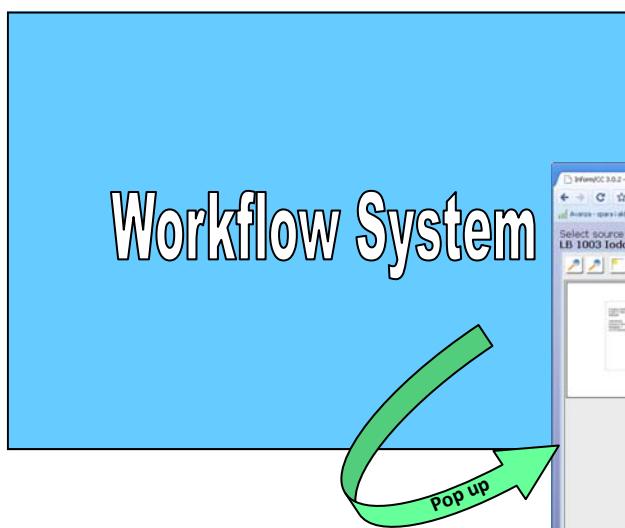

---

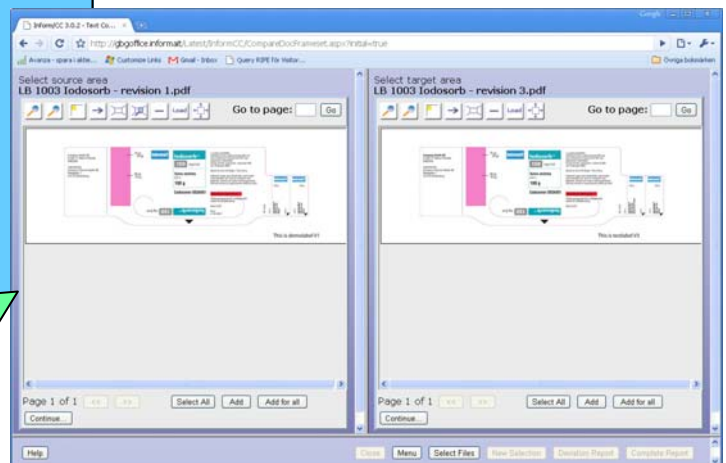

# Integrated Content Compare

The Content Compare application developed by InformaIT is a an automated proofreading tool for professional electronic comparison of artwork files.

From version 3.0 there is also a possibility to integrate Content Compare in the workflow system you use today. The integration is a hassle free solution that requires none or very small changes in the workflow system of your choice.

Source and target file gets automatically selected. Reports are stored with identifier from your system!

Any modern system can handle the integration as we do not rely on a specific technology. Basically, if your system can open a web page, it can integrate with Content Compare.
